

**SUMMARY OF PEER-REVIEWED PUBLICATIONS ON EFFICACY
OF PREMILKING AND POSTMILKING TEAT
DISINFECTANTS PUBLISHED SINCE 1980**

(Updated January, 2004)

The last comprehensive review on postmilking teat disinfection was published by Pankey et al. (1983 *National Mastitis Council Proceedings* pages 52-86 and the *Journal of Dairy Science* 67:1336-1353) over a decade ago. In 1988, an attempt was made to develop what was referred to as “teat dip fact sheets”. However, due to various concerns this document was never published. Consequently, a mechanism to disseminate information on efficacy of teat disinfectants in a timely manner was never developed. This issue resurfaced during the 1994 National Mastitis Council Annual Meeting. A request was made that the NMC Research Committee develop a bibliography of teat disinfectants as a means of providing factual information on teat disinfectant efficacy that would be available to members of the dairy community and other interested individuals. A motion was approved unanimously that the NMC Research Committee Chairman appoint a subcommittee to undertake this project.

The subcommittee’s approach to this assignment was simple and straight-forward and was based on the following criteria: **1) Only information from peer-reviewed scientific journals published since 1980 was used.** A peer-reviewed scientific journal was defined as a journal with an editor and an editorial board that reviews the scientific merit of a manuscript that has been submitted for publication. **2) Only information from peer-reviewed scientific journals as presented in the published paper was used.** The subcommittee did not judge the merits of the research. **3) The study had to follow protocols essentially as described by the NMC** [most recently published in the 1991 *National Mastitis Council Annual Meeting Proceedings* and the *Journal of Dairy Science* (73:2580-2585)]. **4) Any reference to nonsignificant results were not included except for natural exposure studies that used a positive control.** **5) Products with neither trade name nor manufacturer information mentioned in the publication were not included.**

Please note that not all products tested in accordance with NMC protocols have been published in peer-reviewed scientific journals. Many published research studies do not list trade names and some manufacturers’ addresses have changed since initial publication. In compiling this summary, no attempt was made to determine whether or not the formulation of a product may have changed since publication in peer-reviewed scientific journals. For all of these reasons, users should not rely exclusively on summary tables as they evaluate products, but should also consider each supplier’s current product offerings and request verification of efficacy testing of any product considered.

We hope that information contained in the teat disinfectant bibliography will be useful to those in the dairy community as an aid for preventing and controlling mastitis. This document (first published in the NMC 1995 Regional Meeting Proceedings) will be updated regularly to keep you informed of new developments in a timely manner.

Publication of this information does not imply endorsement of the contents by the National Mastitis Council. This material is not intended to be used as a marketing device.

Table 1. Summary of peer-reviewed research on efficacy of chlorhexidine postmilking teat disinfectants published since 1980.

| Active ingredient(s) & concentration | Trade name | Manufacturer/distributor | Type of study | Significant efficacy against | Reference number |
|--|--------------------------------------|---|--|--|------------------|
| Chlorhexidine (.35%) | Not mentioned | H. B. Fuller Co., Monarch Division, Minneapolis, MN | Natural exposure | <i>S. uberis</i> (P < .01) <i>C. bovis</i> (P < .01) <i>Staph. species</i> (P < .005) | 1 (1990) |
| Chlorhexidine digluconate (.5%), glycerin (6%) | Virosan Teat Dip & Chapless Teat Dip | Bio-Ceutic Labs, Inc. and Anchor Labs, Inc., St. Joseph, MO | Experimental challenge | <i>S. aureus</i> (P ≤ .01) | 2 (1981) |
| Chlorhexidine gluconate (.5%) | Not mentioned | Babson Bros.Co., Naperville, IL | Experimental challenge | <i>S. aureus</i> (P < .001) <i>S. agalactiae</i> (P < .005) | 3 (1990) |
| Chlorhexidine gluconate (.55%) | Tesan, Chapless Teat Dip | Whitmoyer Labs, Myerstown, PA | Experimental challenge | <i>S. aureus</i> (P < .01) <i>S. agalactiae</i> (P < .01) | 4 (1983) |
| Chlorhexidine gluconate (.55%) | Ultra-Shield | IBA, Inc., Millbury, MA | Natural exposure - positive control (compared to FS-103 - 1% iodine) | Coagulase-negative staphylococci (P ≤ 01) <i>Escherichia coli</i> (P ≤ .08) Gram-positive bacilli (P ≤ .05) | 35 (1995) |
| Chlorhexidine (.4%), glycerine (10%) | Fight Bac | Deep Valley Farm, Brooklyn, CT | Natural exposure - positive control (compared to Nolvasan - .5% chlorhexidine & 4.9% glycerin) | Not significantly different from positive control for <i>S. aureus</i> , <i>Streptococcus</i> species, and coliforms | 5 (1987) |
| Chlorhexidine gluconate (.5%), glycerin (4%) | Blue Ribbon | IBA, Inc., Millbury, MA | Experimental challenge | <i>S. aureus</i> (P < .001) <i>S. agalactiae</i> (P < .05) | 37 (1997) |

Table 2. Summary of peer-reviewed research on efficacy of iodine postmilking teat disinfectants published since 1980.

| Active ingredient(s) & concentration | Trade name | Manufacturer/distributor | Type of study | Significant efficacy against | Reference number |
|---|-------------------|---|--|---|-------------------------|
| .05% iodine | Not mentioned | BASF, Wyandotte Corp., Wyandotte, MI | Experimental challenge | <i>S. aureus</i> (P < .01) | 6 (1983) |
| .1% iodine | PRE-VAIL | IBA Inc., Sanitation Division, Millbury, MA | Experimental challenge | <i>S. agalactiae</i> (P < .005) | 7 (1990) |
| .1% iodine | Not mentioned | H. B. Fuller Co., Monarch Chemicals Division, Minneapolis, MN | Experimental challenge | <i>S. aureus</i> (P < .01) | 6 (1983) |
| .1% iodine | Not mentioned | IBA Inc., Millbury, MA | Experimental challenge | <i>S. aureus</i> (P < .01) | 6 (1983) |
| .1% iodine | Not mentioned | BASF, Wyandotte Corp., Wyandotte, MI | Experimental challenge | <i>S. aureus</i> (P < .01) | 6 (1983) |
| .1% iodine | Not mentioned | West Agro Chemical Co., Shawnee Mission, KS | Natural exposure -positive control (compared to Bovadine - 1% iodine) | Not significantly different from positive control | 8 (1983) |
| .1% iodine, .75% glycerin | Not mentioned | West Agro Chemical Co., Kansas City, MO | Experimental challenge | <i>S. aureus</i> (P < .001) <i>S. agalactiae</i> (P < .05) | 9 (1993) |
| .175% iodine | Not mentioned | West Agro Chemical Co., Kansas City, MO | Experimental challenge | <i>S. aureus</i> (P < .001) | 9 (1993) |

Table 2 (cont). Summary of peer-reviewed research on efficacy of iodine postmilking teat disinfectants published since 1980.

| Active ingredient(s) & concentration | Trade Name | Manufacturer/distributor | Type of study | Significant efficacy against | Reference number |
|---|---------------|---|---|--|------------------|
| .18% iodine, 15% collagen protein emollient | Not mentioned | Bristol-Myers Animal Health Care, Evansville, IN | Experimental challenge | <i>S. aureus</i> (P < .001) <i>S. agalactiae</i> (P < .025) | 10 (1989) |
| .25% iodine | Not mentioned | H. B. Fuller Co., Monarch Division, Minneapolis, MN | Natural exposure | <i>S. aureus</i> (P < .05) <i>S. agalactiae</i> (P < .05) <i>C. bovis</i> (P < .05) <i>Staph. species</i> (P < .05) | 11 (1991) |
| .25% iodine | Not mentioned | West Agro Chemical Co., Shawnee Mission, KS | Natural exposure- positive control (compared to Bovadine-1% iodine) | Not significantly different from positive control | 8 (1983) |
| .25% iodine | Not mentioned | BASF, Wyandotte Corp., Wyandotte, MI | Experimental challenge | <i>S. aureus</i> (P < .05) | 6 (1983) |
| .25% iodine | Not mentioned | BASF, Wyandotte Corp., Wyandotte, MI | Experimental challenge | <i>S. aureus</i> (P < .01) | 6 (1983) |
| .3% iodine | Not mentioned | H. B. Fuller Co., Monarch Chemicals Division, Minneapolis, MN | Experimental challenge | <i>S. aureus</i> (P < .01) | 6 (1983) |
| .5% iodine | Theratec | Babson Bros. Co., Oak Brook, IL | Natural exposure | <i>S. aureus</i> (P < .001) <i>S. agalactiae</i> (.05 < P < .10) <i>C. bovis</i> (P < .001) | 12 (1986) |
| .5% iodine | FS-104 | IBA Inc., Millbury, MA | Experimental challenge | <i>S. agalactiae</i> (P < .005) | 7 (1990) |
| .5% iodine | Not mentioned | BASF, Wyandotte Corp., Wyandotte, MI | Experimental challenge | <i>S. aureus</i> (P < .025) | 6 (1983) |

Table 2 (cont). Summary of peer-reviewed research on efficacy of iodine postmilking teat disinfectants published since 1980.

| Active ingredient(s) & concentration | Trade name | Manufacturer/distributor | Type of study | Significant efficacy against | Reference number |
|---|-----------------------------|--|---|---|------------------|
| .5% iodine | Not mentioned | H. B. Fuller Co., Monarch Chemicals Division, Minneapolis, MN | Experimental challenge | <i>S. aureus</i> (P < .01) | 6 (1983) |
| .5% iodine | Not mentioned | IBA Inc., Millbury, MA | Experimental challenge | <i>S. aureus</i> (P < .01) | 6 (1983) |
| 1% iodine | Teat Kote | Babson Bros. Co., Oak Brook, IL | Natural exposure | <i>S. aureus</i> (P < .05) <i>S. agalactiae</i> (P < .001) Other streptococci (P < .001) | 12 (1986) |
| 1% iodine | Bovadine | West Agro Chemical Co., Bedford, NH | Natural exposure | <i>S. aureus</i> (P = .03) Streptococci (P = .01) <i>Staph. species</i> (P < .001) <i>C. bovis</i> (P < .001) | 13 (1983) |
| 1% iodine | Not mentioned | BASF, Wyandotte Corp., Wyandotte, MI | Experimental challenge | <i>S. aureus</i> (P < .01) | 6 (1983) |
| 1% iodine, 10% emollients (glycerin, lanolin & polyvinyl pyrrolidone) | Teat Kote 10/III | Babson Bros. Co., Romeoville, IL | Natural exposure - positive control [compared to Bovadine (1% iodine, 10% glycerin)] | Not significantly different from positive control for streptococci & major pathogens. More coliforms (P < .05) & fewer <i>Staph. species</i> (P < .05) than positive control | 14 (1994) |
| 1% titratable iodine, glycerin (10%) | FS-103 X | IBA, Inc., Millbury, MA | Experimental challenge | <i>S. aureus</i> (P < .001) <i>S. agalactiae</i> (P < .1) | 37 (1997) |
| .5% titratable iodine, glycerin (1%), lanolin (.5%), aloe vera (.5%) | Bac-Stop | IBA, Inc., Millbury, MA | Experimental challenge | <i>S. aureus</i> (P < .001) <i>S. agalactiae</i> (P < .005) | 38 (1997) |
| 1% titratable iodine, glycerin (2%) | FS-103 II | IBA, Inc., Millbury, MA | Experimental challenge | <i>S. aureus</i> (P < .1) <i>S. agalactiae</i> (P < .05) | 38 (1997) |
| .5% iodine | Derma Kote | Westfalia-Surge, Naperville, IL | Experimental challenge | <i>S. aureus</i> (P < .001) <i>S. agalactiae</i> (P < .1) | 41 (2000) |
| 1% available Iodine, 10% glycerine | Bovadine with I- Tech II | West Agro, Inc. Kansas City, MO | Experimental challenge | <i>S. aureus</i> (P < .001) <i>S. agalactiae</i> (P < .005) | 45 (2003) |

Table 3. Summary of peer-reviewed research on efficacy of linear dodecyl benzene sulfonic acid postmilking teat disinfectants published since 1980.

| Active ingredient(s) & concentration | Trade name | Manufacturer/ distributor | Type of study | Significant efficacy against | Reference number |
|---|-------------------|---|--|---|-------------------------|
| Linear dodecyl benzene sulfonic acid, 1.94% | Blu-Gard | Economics Lab, Inc., St. Paul, MN | Natural exposure | <i>S. aureus</i> (P < .05) | 15 (1984) |
| Linear dodecyl benzene sulfonic acid, 1.94% | Blu-Gard | Economics Lab, Inc., St. Paul, MN | Experimental challenge | <i>S. aureus</i> (P < .05) <i>S. agalactiae</i> (P < .1) | 16 (1984) |
| Linear dodecyl benzene sulfonic acid, 1.94% | Blu-Gard | Economics Lab, Inc., St. Paul, MN | Natural exposure | <i>S. agalactiae</i> (P < .005) | 17 (1985) |
| Linear dodecyl benzene sulfonic acid, 1.94% | Blu-Gard | Economics Lab, Inc., St. Paul, MN | Natural exposure- positive control (compared to Udder Guard- 1% iodine) | Significantly (P < .05) more effective than positive control for <i>S. aureus</i> | 17 (1985) |
| Linear dodecyl benzene sulfonic acid, 1.94% | Blu-Gard | Klenzade Division, Economics Lab Inc., St. Paul, MN | Natural exposure | <i>S. aureus</i> (P < .005) | 18 (1983) |
| Linear dodecyl benzene sulfonic acid, 1.94% | Blu-Gard | Klenzade Division, Economics Lab Inc., St. Paul, MN | Experimental challenge | <i>S. agalactiae</i> (P < .01) <i>S. aureus</i> (P < .01) | 19 (1982) |
| Linear dodecyl benzene sulfonic acid, 1.9% plus .55% iodophor | Tandem | IBA, Inc., Millbury, MA | Experimental challenge | <i>S. aureus</i> (P < .005) <i>S. agalactiae</i> (P < .025) | 20 (1985) |

Table 4. Summary of peer-reviewed research on efficacy of other products used as postmilking teat disinfectants published since 1980.

| Active ingredient(s) & concentration | Trade name | Manufacturer/distributor | Type of study | Significant efficacy against | Reference number |
|---|--|--|--|--|------------------|
| 1:3 dilution: Lauricidin® (.25%), caprylic/capric acids (1.25), and lactic acid (1.5%) | Laurisan Complete Teat Dip Concentrate | Animal Care Products, 3M Co., St. Paul, MN | Experimental challenge | <i>S. aureus</i> (P < .001) <i>S. agalactiae</i> (P < .001) | 21 (1988) |
| Lauricidin® (1%), caprylic and capric acids (5%), lactic acid (6%), and lauric acid (.85%) | Lauricare® Teat Dip | 3M Company, St. Paul, MN | Experimental challenge | <i>S. aureus</i> (P ≤ .001) <i>S. agalactiae</i> (P ≤ .025) | 22 (1992) |
| Lauryl sulfate, solubilized milk protein, and glycerin (4.8%) | ALL DAY | Ag Products, Syracuse, NY | Experimental challenge | <i>S. aureus</i> (P < .01) <i>S. agalactiae</i> (P < .005) | 20 (1985) |
| Unknown | Powdered Teat Dip and Frost Protectant | IBA Inc., Millbury, MA | Natural exposure-positive control (compared to Bovadine- 1% iodine) | Not significantly different from positive control against environmental pathogens | 23 (1994) |
| Quaternary ammonium (.5%) | Surge Tegraron After Milking Teat Dip | Babson Bros.Co., Oak Brook, IL | Natural exposure | <i>S. aureus</i> (P < .01) <i>C. bovis</i> (P < .01) | 24 (1982) |
| Quaternary ammonium (.5%) | Tegraron | Babson Bros. Co., Oak Brook, IL | Experimental challenge | <i>S. agalactiae</i> (P ≤ .025) | 25 (1983) |
| Concentrate contains 12% Septigon™ germicide, 22% aqueous solution of N-[2-[[2-(dodecylamino) ethyl]amino] ethyl] glycine + N-[3-(dodecylamino) propyl] glycine + related alkyl-amino derivatives. Use diluted to 1.5% active ingredients | Control™ Concentrate Teat Dip | Animal Care Products, 3M Co., St. Paul, MN | Experimental challenge | <i>S. aureus</i> (P < .001) <i>S. agalactiae</i> (P < .005) | 26 (1986) |
| Sodium chlorite (.64%) and lactic acid (2.64%) | UDDERgold | Alcide Corp., Norwalk, CT | Natural exposure | <i>S. aureus</i> (P < .01) <i>S. dysgalactiae</i> (P < .025) Major pathogens (P < .01) | 27 (1989) |
| Sodium chlorite (.64%) and lactic acid (2.64%) | UDDERgold | Alcide Corp., Norwalk, CT | Experimental challenge | <i>S. aureus</i> (P < .001) <i>S. agalactiae</i> (P < .1) | 28 (1990) |
| Sodium chlorite (.64%) and lactic acid (2.64%) | UDDERgold | Alcide Corp., Norwalk, CT | Natural exposure- positive control (compared to Bovadine- 1% iodine) | Not significantly different from positive control for environmental pathogens | 28 (1990) |

Table 4 (cont.). Summary of peer-reviewed research on efficacy of other products used in postmilking teat disinfectants published since 1980.

| Active ingredient(s) & concentration | Trade name | Manufacturer/distributor | Type of study | Significant efficacy against | Reference number |
|---|---|---|--|--|------------------|
| Sodium chlorite and lactic acid | UDDERgold | Alcide Corp., Norwalk, CT | Natural exposure- positive control (compared to .5% iodophor teat dip) | Significantly (P = .06) more effective than positive control against all pathogens | 29 (1990) |
| Sodium chlorite (.64%) and lactic acid (2.64%) | UDDERgold | Alcide Corp., Norwalk, CT | Experimental challenge | <i>S. aureus</i> (P ≤ .001) <i>S. agalactiae</i> (P ≤ .1) | 30 (1994) |
| Sodium chlorite (.64%) and mandelic acid (3%) | Not mentioned | Alcide Corp., Norwalk, CT | Experimental challenge | <i>S. aureus</i> (P ≤ .001) <i>S. agalactiae</i> (P ≤ .01) | 30 (1994) |
| Sodium dichloro-s-triazene-trione (1.0%) | Not mentioned | Kendall Co., Boston, MA | Experimental challenge | <i>S. aureus</i> (P < .01) <i>S. agalactiae</i> (P < .025) | 4 (1983) |
| Sodium dichloro-s-triazene-trione (1.7%) | Not mentioned | Kendall Co., Boston, MA | Experimental challenge | <i>S. agalactiae</i> (P < .025) | 4 (1983) |
| Sodium hypochlorite (.6%) | Not mentioned | Kendall Co., Boston, MA | Experimental challenge | <i>S. aureus</i> (P < .05) | 4 (1983) |
| Sodium hypochlorite (.9%) | Not mentioned | Kendall Co., Boston, MA | Experimental challenge | <i>S. aureus</i> (P < .01) | 4 (1983) |
| 2800 ppm of available chlorine as hypochlorous acid | Agrisept Tabs | Mick Doyle Marketing Int., Ltd., Naas, Ireland | Experimental challenge | <i>S. aureus</i> (P < .001) <i>S. agalactiae</i> (P < .001) | 36 (1996) |
| 3000 ppm of available chlorine as hypochlorous acid | EfferceptVet | Effercept Products, div. of Micrel Ltd., Inc., Phoenix, AZ | Experimental challenge | <i>S. aureus</i> (P < .001) <i>S. agalactiae</i> (P < .01) | 36 (1996) |
| Chlorous acid and chlorine dioxide | Ciderm™ | Arco Research, Inc., Melville, NY for Farnam Companies, Inc., Phoenix, AZ | Experimental challenge | <i>S. aureus</i> (P < .001) <i>S. agalactiae</i> (P < .005) | 39 (1998) |
| Phosphoric acid (1.67%) and sodium chlorite (2.5%) | Farnam Pre and Post Milking Teat Dip Concentrate™ | Arco Research, Inc., Melville, NY for Farnam Companies, Inc., Phoenix, AZ | Experimental challenge | <i>S. aureus</i> (P < .01) | 39 (1998) |
| Phenol | Masticide | Sporicidin International, Rockville, MD | Natural exposure | <i>S. aureus</i> (P < .05) <i>S. uberis</i> (P < .05) <i>Staph. species</i> (P < .005) <i>C. bovis</i> (P < .005) | 40 (1999) |

Table 4 (cont.). Summary of peer-reviewed research on efficacy of other products used in postmilking teat disinfectants published since 1980.

| | | | | | |
|--|-------------------|------------------------------------|------------------------|--|--------------|
| Lactic acid (2.9%) and sodium chlorite (.7%) | Bi-Sept | Westfalia-Surge, Naperville, IL | Experimental challenge | <i>S. aureus</i> (P < .001) <i>S. agalactiae</i> (P < .001) | 41 (2000) |
| Bronopol, quaternary ammonium, and isocyanuric acid | Actisept Pre Post | Activon Products, Fort Collins, CO | Experimental challenge | <i>S. aureus</i> (P < .001) <i>S. agalactiae</i> (P < .05) | 43 (2002) |
| Sodium chlorite (.32%), 2.5% glycerin, .27% sodium dodecylbenzene sulfonic acid, and lactic acid (1.32%) | Red | Alcide Corp., Redmond, WA | Experimental challenge | <i>S. aureus</i> (P < .05) <i>S. agalactiae</i> (P < .05) | 44 (2002) |
| Sodium chlorite (.32%), 2.5% glycerin, .53% sodium dodecylbenzene sulfonic acid, and lactic acid (1.32%) | Blue | Alcide Corp., Redmond, WA | Experimental challenge | <i>S. aureus</i> (P < .05) <i>S. agalactiae</i> (P < .05) | 44 (2002) |

Table 5. Summary of peer-reviewed research on efficacy of premilking teat disinfectants published since 1980.

| Active ingredient(s) & concentration | Trade name | Manufacturer/distributor | Type of study | Significant efficacy against | Reference number |
|--|---------------|---|------------------|--|------------------|
| Chlorhexidine (.35%) | Not mentioned | H. B. Fuller Co., Monarch Division, Minneapolis, MN | Natural exposure | Major pathogens (P < .10) <i>Staph. species</i> (P < .05) Major & minor pathogens (P ≤ .05) | 31 (1994) |
| Iodophor (.1%) | Pre-Vail | IBA, Inc., Millbury, MA | Natural exposure | Environmental pathogens (P < .10) Major pathogens (P < .05) | 32 (1987) |
| Iodophor (.25%) | Bovadine II | West Agro Chemical Co., Kansas City, MO | Natural exposure | Environmental pathogens (P < .05) Major pathogens (P < .025) | 32 (1987) |
| Iodine (.25%) | Predine | H. B. Fuller Co., Monarch Division, Minneapolis, MN | Natural exposure | Gram-negative bacteria (P < .025) Major pathogens (P < .001) | 33 (1993) |
| Iodophor (.55%) plus linear dodecyl benzene sulfonic acid (1.9%) | Tandem | IBA, Inc., Millbury, MA | Natural exposure | Environmental pathogens (P < .10) Major pathogens (P < .10) | 32 (1987) |
| Sodium chlorite (.64%) and lactic acid (2.64%) | 4XLA | Alcide Corp., Norwalk, CT | Natural exposure | <i>S. aureus</i> (P < .05) <i>S. uberis</i> (P < .05) Major pathogens (P < .01) | 34 (1993) |
| Phenolic combination | Masticide | Sporicidin International, Rockville, MD | Natural exposure | <i>S. uberis</i> (P < .005) <i>S. dysgalactiae</i> (P < .05) Gram-negative bacteria (P < .05) Coagulase-negative <i>Staphylococcus</i> spp. (P < .025) | 42 (2001) |
